1.INTRODUCTION

1.1. Objectif

L'objectif du présent document vise à décrire la procédure de migration des Ordinateurs vers le nouveau domaine ancv.local

2.PROCEDURE

2.1. Migration des Ordinateurs vers le domaine Ancv.local

2.1.1. Prerequis

Avant de migrer une PC, il est impératif de suivre les étapes suivantes :

- Vérifier que le compte utilisateur possédant le PC à migrer, existe dans le nouveau domaine ancv.local
- Vérifier sur le DNS ancv.local s'il y a un enregistrement DNS statique du PC, si oui le supprimer
- Désactiver l'antivirus Kaspersky
- Modifier les partages reseaux en remplçant le chemin par l'@IP
- Verifier si le PC est connecter en filaire (pas de wifi ni de VPN)
- Vérifier à partir du serveur QMM (SRV-PRD-QMM-001.ancv.local) si les pare feu du PC sont actives ou non
 - Ping < FQDN du Pc à migrer>

PS C:\Users\scc1> ping new-041.ancv.com	ſ
Envoi d'une requête 'ping' sur new-041.ancv.com [172.16.69.6] avec 32 octets de données : Réponse de 172.16.69.6 : octets=32 temps=6 ms TTL=119 Réponse de 172.16.69.6 : octets=32 temps=14 ms TTL=119 Réponse de 172.16.69.6 : octets=32 temps=8 ms TTL=119 Réponse de 172.16.69.6 : octets=32 temps=13 ms TTL=119	

Important : Si le Ping est sans réponse vérifier si le pare-feu Windows est activé

Se déplacer chez l'utilisateur est désactiver le Pare-feu Windows

Tester en local avec la commande Get-NetFirewallProfile

PS C:\Us	sers\kvilber	Get-NetFirewallProfile	I	select	name,enabled
name	Enabled				
Domain	True				
Private	True				
Public	True				

Si c'est le cas comme on le voit sur la figure ci-dessus, désactiver le Pare-feu Windows

Lancer une fenêtre PowerShell en tant qu'administrateur

Exécuter : netsh advfirewall set allprofiles state off

Re-tester le ping à partir du serveur QMM pour valider la desactivation du Pare-Feu Windows

2.1.1. Procédure de migration des ordinateurs

Le processus de migration comporte 4 étapes

- Discovery : installation de l'agent QMM
- Processing (1) : Récupération du profil (Partage, Imprimante, file system, Clé de Registre)
- Processing (2) : Récupération du profil (Local, itinérant)
- Move : Déplacement de l'ordinateur vers le domaine ancv.local

A partir du serveur QMM, lancer Resource Updating Manager

1. Discovery

Sélectionner 01 – Discovery Ajouter les ordinateurs à migrer un par un Add Computers ----- Single Computer

SQMM - 172.16.8.23 - Connexion Bureau à distance

Renseigner le FQDN de l'ordinateur et le domaine

Add Computer X
Computer name:
new-041.ancv.com
Computer domain:
ancv.com
Add Cancel

Le PC est listé dans la fenétre a droite

NEW-056.ANCV.LOCAL Scripting

OK 05/11/2021 16:22:05

2.2. Forcer la synchronisation des mots de passe du domaine ancv.com vers ancv.local

A partir du serveur QMM, lancer Quest Migration Manager

Selectionner ---- Synchronisation ---Stop

Attendre que la tache passe de 0% à 100%

Lorsque le last operation progess est à 100%, proceder au demarrage de la synchro

-----→ Start and Re-Sync
